

MAT 115E Introduction to Programming Language

Lab-1/ CRN : 23492

Instructor: Dr. Evren Tanrıöver

Lab Assistant: Res. Asst. Tugce Sezer

1 Question 1

A formula that converts a measure A to measure B is given as follows:

$$B = (20 - A) \times 2.3 + 54 \times A$$

Write a C program that reads a measure A from standart input (shortly, stdin) and converts it to measure B and print it on the screen with the following format.

Example Scenario:

> Enter the measure A: 12
> 12 A is equal to 666.40 B.

2 Question 2

Develop a C program that generates the following output using one printf() for each sentence.

Output:

This is the first sentence. This is the second sentence.
This is the third sentence.
This is the fourth sentence.

3 Question 3

Let us consider a rectangle with the height of h cm and the length of l cm. One can want to compute the area and the circumference of the rectangle.

Write a C program that reads h and l from the standart input (shortly, stdin). Your program should compute the area and the circumference of the rectangle and display them on the screen.
